our economy and future way of life depend on how well american manufacturing managers adapt to the dynamic globally competitive landscape and evolve their firms to keep pace a major challenge is how to structure the firms environment so that it attains the speed and low cost of high volume flow lines while retaining the flexibility and customization potential of a low volume

job shop the books three parts are organized according to three categories of skills required by managers and engineers basics intuition and synthesis part i reviews traditional operations management techniques and identifies the necessary components of the science of manufacturing part ii presents the core concepts of the book beginning with the structure of the science of manufacturing and a discussion of the systems approach to problem solving other topics include behavioral tendencies of manufacturing plants push and pull production systems the human element in operations management and the relationship between quality and operations chapter conclusions include main points and observations framed as manufacturing laws in part iii the lessons of part i and the laws of part ii are applied to address specific manufacturing management issues in detail the authors compare and contrast common problems including shop floor control long range aggregate planning workforce planning and capacity management a main focus in part iii is to help readers visualize how general concepts in part ii can be applied to specific problems written for both engineering and management students the authors demonstrate the effectiveness of a rule based and data driven approach to operations planning and control they advance an organized framework from which to evaluate management practices and develop useful intuition about manufacturing systems

the assembly of welded reservoirs at the boeing tube duct and reservoir center tdrc is a traditional batch and queue operation that relies heavily on manual craftsmanship the production system experiences high variability in cycle times high use of overtime and poor ontime performance the value provided by the system to boeing and its customers is characterized by considering the associated costs of late delivery inventory labor and opportunity cost to understand the system s performance the system s processes are mapped and modeled using discrete event simulation the simulation is used to evaluate the benefits of changes to staffing overtime implementation and shop floor control based on the results of the simulation lead times are increased to stabilize delivery and a conwip system is implemented to improve productivity and reduce overtime costs subsequent production data show that these changes are effective and that this framework provides successful strategies for value characterization system stabilization cost reduction and increases in value creation

from driverless cars to pilotless planes many functions that have previously required human labor can now be performed using artificial intelligence for businesses this use of ai results in reduced labor costs and even more important creating a competitive advantage how does one look at any organization and begin the work of automating it in sensible ways this book provides the

blueprint for automating critical business functions of all kinds it outlines the skills and technologies that must be brought to bear on replicating human like thinking and judgment in the form of algorithms many believe that algorithm design is the exclusive purview of computer scientists and experienced programmers this book aims to dispel that notion an algorithm is merely a set of rules and anyone with the ability to envision how different components of a business can interact with other components already has the ability to work in algorithms though many fear that the use of automation in business means human labor will no longer be needed the author argues that organizations will re purpose humans into different roles under the banner of automation not simply get rid of them he also identifies parts of business that are best targeted for automation this book will arm business people with the tools needed to automate companies making them perform better move faster operate cheaper and provide great lasting value to investors
