this book covers various aspects of sustainability including green economy green energy and waste management it offers analysis of key challenges in contemporary world as well as concepts and solutions that can be implemented to deal with them the authors represent various universities located all over the europe hence their perspectives are different and confronting

their points of view will result in holistic review of current topics connected with circular economy the book can be interesting for academics as it presents the latest research results for business practitioners as it supplements research with case studies and real life examples and for students who can learn about new challenges solutions they will have to deal with in their professional careers

this comprehensive collection of problems contains questions from energy and thermal engineering practice as well as from existing exercises and examinations the solutions are very detailed and therefore comprehensible since the structure of the book is based on that of the textbook fundamentals of technical thermodynamics students can work through the contents in depth and check their learning success in the present 2nd edition extensions and additions have been made for a better understanding of the solution paths numerous checkboxes and exercises with solutions have been added in addition the extended introduction deals with the nature of entropy and draws attention to the benefits of thermodynamics

the book highlights new trends and challenges in research on agents and the new digital and knowledge economy it includes papers on business process management agent based modeling and simulation and anthropic oriented computing that were originally presented at the 16th international kes conference on agents and multi agent systems technologies and applications kes amsta 2022 held at rhodes greece in june 20 22 2022 the respective papers cover topics such as software agents multi agent systems agent modeling mobile and cloud computing big data analysis business intelligence artificial intelligence social systems computer embedded systems and nature inspired manufacturing all of which contribute to the modern digital economy

the papers collected here are with three exceptions those presented at a conference on probability and causation held at the university of california at irvine on july 15 19 1985 the exceptions are that david freedman and abner shimony were not able to contribute the papers that they presented to this volume and that clark glymour who was not able to attend the conference did contribute a paper we would like to thank the national science foundation and the school of humanities of the university of california at irvine for generous support william harper university of western ontario brian skyrms university of california at irvine vll introduction part i decisions and games causal notions have recently come to figure prominently in discussions about rational decision making indeed a relatively influential new approach to theorizing about rational choice has come to be called causal decision theory 1 decision problems such as newcombe s problem and some versions of the prisoner s dilemma where an

act counts as evidence for a desired state even though the agent knows his choice of that act cannot causally influence whether or not the state obtains have motivated causal decision theorists

autonomous agents have become a vibrant research and development topic in recent years attracting activity and attention from various areas the basic agent concept incorporates proactive autonomous units with goal directed behaviour and communication capabilities the book focuses on autonomous agents that can act in a goal directed manner under real time constraints and incomplete knowledge being situated in a dynamic environment where resources may be restricted to satisfy such complex requirements the author improves combines and applies results from areas like planning constraint programming and local search the formal framework developed is evaluated by application to the field of computer games which fit the problem context very well since most of them are played in real time and provide a highly interactive environment where environmental situations are changing rapidly

this volume investigates developments in and management of transportation systems future trends and what effects these will have on society the book studies transportation systems planning traffic problems and the issue of conservation the use of logistics and the role of computers and robotics in traffic control
